## We create data quality!

### Customs tariff classification

#### The essence of customs tariffication

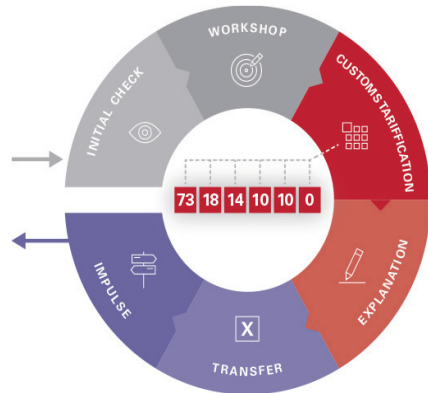

The customs tariff number is the central data element in the field of customs and foreign trade. However, finding the right customs tariff number may not be easy. In export business, every good must have a unique customs tariff item. The challenge is which one, if there are several suitable positions for one good.

eDOC AS supports you with customs and technically trained employees, years of experience and a highly developed software.

#### Unique customs tariff numbers in the blink of an eye

From the sighting of the data to the processing in our software eTAR DATA to the final delivery - we tariff small, but also large volumes of data in the blink of an eye.

Via an interface to EZT-Online in the software eTAR DATA, daily updated customs data is used for the tariff classification of the goods. Further interfaces to the BAFA correlation list and the annexes of the EG Dual-Use-Regulation support the export control.

#### Individual service offerings

Whether one-time projects or long-term partnerships or the complete outsourcing of customs tariff allocation - we guarantee all our customers the highest standards of quality, security and transparency.
